

For 50 years Fiam has been manufacturing industrial tools to the highest standard possible. From January 1995 Fiam obtained the ISO 9001 certification, the first in its field in Italy, and one of the first in its field in the world.

BalTec (UK) Ltd are now partners in the UK for their superb range of screwdriving technology and are pleased to be able to supply and integrate these products to our clients.

ELECTRIC SREWDRIVER RANGE

Automatic Screw Feed Systems

For a faster productive process: this is the new feeding system NCA, completely designed by Fiam. The tightening system NCA is particularly suitable for large and medium batch of equal screws; it offers the following important benefits:

- the screw is automatically sent from the bowl to the screwdriver head;
- the screw is automatically positioned on the workpiece at the same time as the screwdriver is operating.

The work cycle is simple, fast and safe:

- the screws are loaded in the bowl
- the screwdriver is operated
- the screw automatically arrives at the screwdriver head
- the screw is drawn in another screw arrives at the screwdriver head, is drawn in and so the cycle continues
